

Addendum for the Version 2 Nav PAL

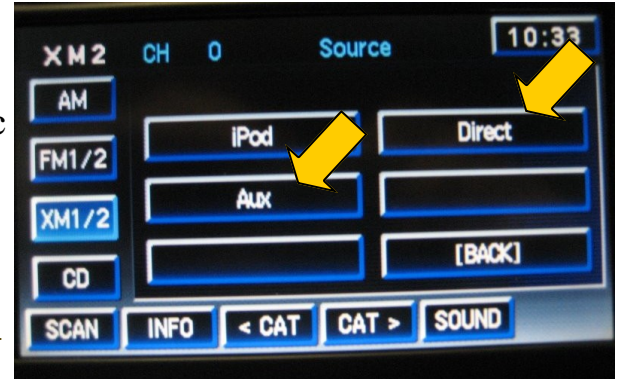

Some new features have been added to the Version 2 PAL software. Here is the new Playing Menu:

The new SOURCE button allows the user to enter two new modes of operation, DIRECT mode and AUX mode.

And a new PAUSE button allows you to stop both music and audiobooks.

Press the SOURCE button and the display changes to this

Pressing DIRECT allows you direct control of your iPod, iTouch, or iPhone. It also allows you to go the next or previous song. You can also use the steering wheel controls if you have them.

AUX mode allows the audio input from the two RCA jacks on the PAL module to be heard through the Corvette audio system.

Connect an adapter cable to the two jacks and listen to other music devices through your PAL. Remember that the volume setting on your device affects the sound system volume.

The overall Menu order has changed. Now, pressing the SCAN button takes you directly to the Music menu. From the top Music menu, press SCAN again to enter the Settings menu, with new features:

If the Timeout button is ON, the Nav screen will default to the Playing menu after 10 seconds of inactivity.

Turning it OFF will allow you manually control which menu to leave on the Nav screen.

The new Display button offers you a choice of Info, Time, Position (song number of a group), Title, and Artist.

For any of the Settings (such as Shuffle, Repeat, etc.) push the button to cycle through the choices. When your choice is displayed, push the SCAN button to set your choice in memory.
